HKISO

Hong Kong International Science Olympiad

2026 - 2027

HONG KONG
INTERNATIONAL SCIENCE OLYMPIAD

HONG KONG
INTERNATIONAL SCIENCE OLYMPIAD

What is HKISO?

It is a global science competition designed to spark curiosity, inspire discovery, and promote a deeper understanding of scientific progress. Covering Physics, Biology, and Chemistry, HKISO challenges students with content aligned to the Singapore curriculum, helping them identify their strengths and areas for improvement. Participants also engage in the Science Experiment Challenge, creating a 5-minute video on a given topic to showcase their creativity and knowledge. The Final Round, co-organized with the National University of Singapore (NUS), offers top achievers an opportunity to experience STEM education in Singapore and exchange ideas with peers from around the world.

HKISO Objectives:

Promote Scientific Thinking

Encourage students to develop logical reasoning, critical thinking, and problem-solving skills through science.

Foster Interest in Science

Inspire curiosity and passion for physics, chemistry, biology, and integrated science beyond the classroom.

Enhance Academic Excellence:

Motivate students to strengthen their scientific knowledge and prepare for future STEM-related fields

HONG KONG
INTERNATIONAL SCIENCE OLYMPIAD

General Information:

- **Heat Round Format:** Online from home, under remote proctoring.
- **Content:** General school syllabus, Singapore curriculum as a reference.
- **Test Language:** English.
- **Global Round:** NUS University, Singapore

Test Information:

Level	Grades	Questions (MCQ)	Duration (Mins)	Points
Primary Level	Grades 3 - 6 **(Primary)**	20	60	Correct Answer: +2 No Answer: 0 Wrong Answer: -1
Secondary Level	Grades 7 - 9 **(Secondary 1, 2, 3)** Grades 10 - 12 **(Senior Secondary)**			

Note: Each grade will get their own set of questions..

Competition Stages:

HONG KONG INTERNATIONAL SCIENCE OLYMPIAD

Scoring Criteria:

Award	Score
Gold Medal	Top 8 %
Silver Medal	Next 16%
Bronze Medal	Next 24%
Merit Award	Next 32%
Participation Certificate	All remaining participants

Prizes:

The top three winners will receive **medals and special prizes**, as well as a discount on the **Global Round participation fee**, as follows:

🥇 **First Place:** 60% discount
🥈 **Second Place:** 50% discount
🥉 **Third Place:** 40% discount

⏱️ **In the event of a tie, priority will be given to the participant who completes the competition in the shortest time.**

The discount applies exclusively to the Global Round participation fee and does not cover any additional costs or expenses, such as airfare or accommodation or visa fees etc.

REGISTER NOW!

Competition Preparation and Practice Materials:

The **curriculum specified for each competition** is the primary resource participants should use to prepare, along with the practice materials provided by the competition to help them become familiar with the nature and format of the questions. Participants are also encouraged to consult other relevant educational resources, such as their school textbooks, to strengthen their understanding and preparation.

The practice materials can be accessed through the **official forum:**
https://contestbag.com/forum

Registration:

Registration is available through the Contest Bag website:
https://contestbag.com/

Contest Timeline:

Registration Close — Mar 13, 2027

Mar 20, 2027 — **Heat Round**

Global Finals — Jun 26, 2027

*Global Round dates are subject to change.

Registration Fees:

Round	Fees
Heat	SR 245

HONG KONG
INTERNATIONAL SCIENCE OLYMPIAD

Hong Kong International Science Olympiad Syllabus:

Topics	Learning Objectives	Primary 3	Primary 4 - 6
Integrated Science	Scientific Investigation	• To show curiosity and interest in exploring the environment • To observe phenomena in daily life • To make simple measurements and grouping • To record observations and make simple presentations • To conduct simple scientific investigations.	• To show curiosity and sustained interest in exploring science and technology • To make observations, conduct measurements, record data and present findings • To discuss observations and suggest simple interpretations • To classify things according to common properties or features • To design and conduct simple scientific investigations
	Science, Technology, Society and Environment	• To be aware that science and technology are closely connected to activities in our daily life • To show concern about the safety issues in relation to the use of science and technology • To develop a caring attitude towards living things and the environment • To recognize the proper ways of treating living things and the environment	• To recognize the applications and effects of scientific and technological advances in daily life • To appreciate some important people who have contributed to scientific and technological advancements of this world • To show concern for the environment and climate changes, and recognize the importance of environmental conservation • To recognize that the study of science and technology can both increase our understanding of the world and improve the quality of our life • To identify the issues related to personal health and safety, and take appropriate actions to safe guard these in daily life

HONG KONG INTERNATIONAL SCIENCE OLYMPIAD

Hong Kong International Science Olympiad Syllabus:

Topics	Learning Objectives	Primary 3	Primary 4 - 6
Physics	The Material World	• The Material World To identify some common materials and their uses in daily life • To identify the characteristics and changes of common materials using senses • To design and make artifacts with common • materials • To show concern for the environment and be committed to environmental friendly practices in daily life	• To explore some physical properties of common materials in relation to their suitability for different purposes • To recognize the use of some materials and their impacts on human and the environment • To design and build models by using different materials • To distinguish between reversible changes and those that cannot be easily reversed • To make wise use of natural resources and develop a lifestyle that promotes sustainable development
	The Earth and Beyond	• To recognize and describe the basic patterns and objects in the sky • To identify some features of weather changes • To identify the features of day and night and how they are related to people's life patterns	• To recognize the Earth as a wealth of resources to fulfill our needs • To identify and describe climate and seasonal changes and their effects on our life • To illustrate some natural phenomena observable on the Earth caused by the movement of the Sun, the Earth and the Moon • To appreciate the wonder of the Universe and the contributions of space exploration to everyday life

HONG KONG
INTERNATIONAL SCIENCE OLYMPIAD

Hong Kong International Science Olympiad Syllabus:

Topics	Learning Objectives	Primary 3	Primary 4 - 6
Biology	Life and Living	• To show love and care to living things and the environment • To recognize the observable characteristics and needs of living things • To recognize the different stages of growth and development in living things • To recognize some body parts and their functions To develop healthy living habits • To be aware of the interaction between living things and the environment • To appreciate the existence of a variety of living things	• To respect and care for all living things and show concern for endangered species • To recognise functions of major organs and systems of the body • To be aware of the physical and emotional changes during puberty • To show basic understanding of the life cycle of some living • things • To recognise ways of keeping our body healthy • To recognise the interdependence of living things and their environment • To appreciate the existence of a variety of living things in this world
Chemistry	Energy and Change	• To recognize sources of energy and know their uses in daily life • To recognize heat transfer and some related phenomena • To understand the need for saving energy • To describe energy use at home and in school	• To recognize some patterns or phenomena related to light, sound, electricity and object movement • To recognize different forms of energy involved in energy change • To use energy wisely and save energy in daily life • To recognize the safety measures in using energy of different forms in daily life

HONG KONG INTERNATIONAL SCIENCE OLYMPIAD

Hong Kong International Science Olympiad Syllabus:

Topics	Learning Objectives	Secondary 1 - 2 (Grades 7, 8)	Secondary 3 - Senior Secondary Group (Grades 9, 10, 11 and 12)
Integrated Science	Scientific Investigation	• To identify problems for scientific investigations • To identify variables for fair tests • To plan, design and conduct scientific investigations • To handle apparatus appropriately with necessary precautions • To make detailed observations and record data • To make use of multiple representations to present findings from scientific investigations • To analyze data, draw conclusions and evaluate the investigation process	• To plan, design and conduct scientific investigations with multiple variables to control • To conduct risk assessment in planning and designing investigations • To make detailed observations and precise measurements by using appropriate equipment and instruments • To analyse and interpret the data obtained, and draw conclusions for the investigations • To evaluate the validity and reliability of the investigations and make suggestions for further improvement • To write a full report for the scientific investigation
	Science, Technology, Society and Environment	• To show basic understanding of the development of science and technology and its contribution to our life • To recognize the effects of human activities on the environment, climate and natural resources on the Earth • To act responsibly in conserving the environment for sustainable development • To recognize the usefulness and limitations of science and technology	• To master the skills in evaluating social, ethical, economic, environmental and technological implications of science and technology for sustainable development of the world • To make informed judgements and decisions based on scientific evidence • To understand the relation between the nature of science and the development of the society • To make appropriate use of scientific knowledge and act responsibly as a local and global citizen to identify the issues related to personal health and safety, and take appropriate actions to safeguard these in daily life

HONG KONG INTERNATIONAL SCIENCE OLYMPIAD

Hong Kong International Science Olympiad Syllabus:

Topics	Learning Objectives	**Secondary 1 - 2** (Grades 7, 8)	**Secondary 3 - Senior Secondary Group** (Grades 9, 10, 11 and 12)
Physics	The Material World	• To recognize the physical and chemical properties of different materials • To recognize the uses of different materials in relation to their structures and properties • To understand the need to conserve natural • resources • To recognize some chemical changes and the • materials involved	• To understand the relationship between the uses of materials and their structures and properties • To understand the interaction between different types of matter, and the relationship between matter and energy • To investigate the processing of raw materials and the production of new materials • To evaluate the use of materials from social, economic, environmental and technological perspectives
	The Earth and Beyond	• To recognize the useful sources of minerals and other natural resources available on the Earth • To understand the meanings and relationship of distance, speed and time in describing motion • To describe the effects of force on the motion of an object on the Earth	• To explain some phenomena related to astronomy and space science • To explain natural changes in the environment, such as seasonal and weather changes, climate changes, geological changes and natural disasters • To describe the impact of human activities on the environment, such as exploitation of natural resources and environmental pollution, and suggest measures for conservation

Hong Kong International Science Olympiad Syllabus:

Topics	Learning Objectives	Secondary 1 - 2 (Grades 7, 8)	Secondary 3 - Senior Secondary Group (Grades 9, 10, 11 and 12)
Biology	Life and Living	• To develop interest in studying living things, and show respect to all living things and the environment • To appreciate the diversity of life and to understand the basic principles of classification systems • To recognize that a cell is the basic unit of life To develop basic understanding of some of the life processes • To recognize the processes related to reproduction and understand how a new life is born • To recognize DNA as the genetic materials and the Book of Life • To understand the importance and ways of maintaining body health • To be aware of the impact of human activities on the environment and biodiversity	• To develop and maintain an interest in biology, and a respect of all living things and the environment • To develop an understanding of evolution and the diversity of life • To recognize the level of organization of living organisms • To develop an understanding of the essential life processes • To understand the basic principles of genetics and biotechnology • To be aware of the current advances of biotechnology and the potential impact on society • To develop a commitment to promote personal and community health • To develop an understanding of the interdependence of living things and their environment, and the impact of human activities on the environment and biodiversity
Chemistry	Energy and Change	• To compare the energy options available for particular uses in society • To identify the processes of energy change and the conditions that may affect them • To identify the forms and transformations of energy in a series of interactions • To relate the observed changes in an energy receiver to the quantity of energy transferred • To recognize the environmental effects due to energy production and consumption • To recognize the need to conserve energy and act responsibly in daily life	• To describe systems that can transfer energy efficiently • To explain the principles of energy input and output in different devices • To apply ideas of conservation of energy and energy efficiency in relation to science and simple engineering applications • To understand the environmental and economic effects of using different sources of energy • To propose measures that can help to generate renewable energy and improve the efficiency of energy devices
